**Subject:** Chloralkali Meeting Follow-up

Mike- Thanks for your call this afternoon. We appreciate you bringing in the folks from Occidental and Olin for the meeting with us on 1/9. It was very informative. We look forward to getting a copy of the revised diagram of the diaphragm lifecycle and use process. We would also appreciate information and data on the following items:

- Any available workplace monitoring data for personnel
- Emissions monitoring including both within the facility and ambient
- The amount of asbestos present on site at a given time and the amount of asbestos used in each diaphragm
- Training and surveillance programs for the plant workers, such as where personal protective equipment (PPE) is required
- Any aggregated results of medical examinations for the personnel handling asbestos
- How you arrive at any estimates for emissions or other data
- Any additional information you have on how the asbestos gets from the Brazilian mine to the US port

Thanks again.

Regards,

Robert T. Courtnage
